

HOW TO SCORE YOUR MOVE

Sample Score Sheet 1

The Score Sheet is filled out if the following tiles are played.

Yellow player starts by multiplying the starting score of 11 by 3 resulting in a score of 33. The yellow x3 tile is placed on the corresponding white board space as shown below.

White player adds 2 to the starting score of 11 equalling 13. Places tile on the yellow board and records the score as shown on the score sheet.

**Note 13 is a Prime Number which makes a move more difficult for the White player.*

In the next play, Yellow multiplies his own score by 7 and also decides to use his Red D in the same move. Resulting score is 462.

** D tiles are only used with the same colour number tile.*

White player then attacks Yellow players score by dividing the score of 462 by 3.

**This score is entered on the white side of the score sheet because the white score is changed.*

Next move BLACK multiplies his score by 3 and the game continues.

PRIMEATTACKS	
YELLOW Score	WHITE Score
$11 \times 3 = 33$ $33 \times 7 \times D = 462$ $462 \div 3 = 154$ $154 \div 3 = 157$	$11 + 2 = 13$

Sample Score Sheet 2

How to use the **Blue D**

White player is on a score of 328 and is now White's turn to play.

The D tile can be used by first using another tile of the same colour in the same move.

This example uses the **Blue -3 and **Blue D**
328-3=325
325 doubled is 650**

PRIMEATTACTICS	
YELLOW Score	WHITE Score
	328 - 3 = 325 325 doubled = 650
